

SYSTEM AND METHOD FOR MULTI-DIRECTIONAL
MESSAGE DELIVERY FOR CALL WAITING

ABSTRACT OF THE DISCLOSURE

A system and method of message delivery from a wireless calling party terminal using a wireless communications network to a called party terminal for called parties having call waiting. The method includes determining that the called party terminal's line is busy, delivering a "call waiting no answer" message to the calling party terminal, prompting the calling party to leave a message for the called party, and storing the message from the calling party on the wireless communications network for later delivery to the called party terminal.
